## NEOEN

Neoen is a leading independent power producer of exclusively renewable energy, including solar and wind power, and battery energy storage.

We have a portfolio capacity of 8.7-gigawatts (GW) in operation or under construction across four continents. Our develop-to-own strategy means that we are around for the long-term.

Neoen has an active solar plant, Fox Coulee Solar Farm, in Starland County, Alberta, and several projects in development in Canada.

### Background & Project Need

- Valley Edge BESS is a 250-megawatt (MW), 1000-megawatt hour (MWh)
  battery energy storage system (BESS) proposed for development on private
  land located at Range Road 260 and Township Road 381 in Red Deer County,
  11-kilometres east of the City of Red Deer.
- Valley Edge BESS is a standalone BESS proposed to store and discharge electricity to the Alberta Interconnected Electric System (AIES), and to provide ancillary services such as frequency support, virtual inertia, and network support.
- Neoen Renewables Canada Inc. (Neoen) is exclusively leading development of the Valley Edge BESS project.
- Neoen submitted the Valley Edge BESS project to the Alberta Electric System Operator's (AESO) Interconnection Process in October 2024 (Cluster 2).
- Valley Edge BESS is subject to the Alberta Utilities Commission's (AUC) Rule 007: Applications for Power Plants, Substations, Transmission Lines, Industrial System Designations, Hydro Developments and Gas Utility Pipelines.

## About Battery Energy Storage

- A Battery Energy Storage System (BESS) stores (or "charges") electricity in batteries and later discharges it to an electrical grid.
- Typically, BESS charge when demand is low and discharge when demand rises.
- A BESS can standalone or accompany a renewable technology, like wind or solar power.
- In addition to energy storage, BESS can provide ancillary services such as frequency and voltage support, and virtual inertia.

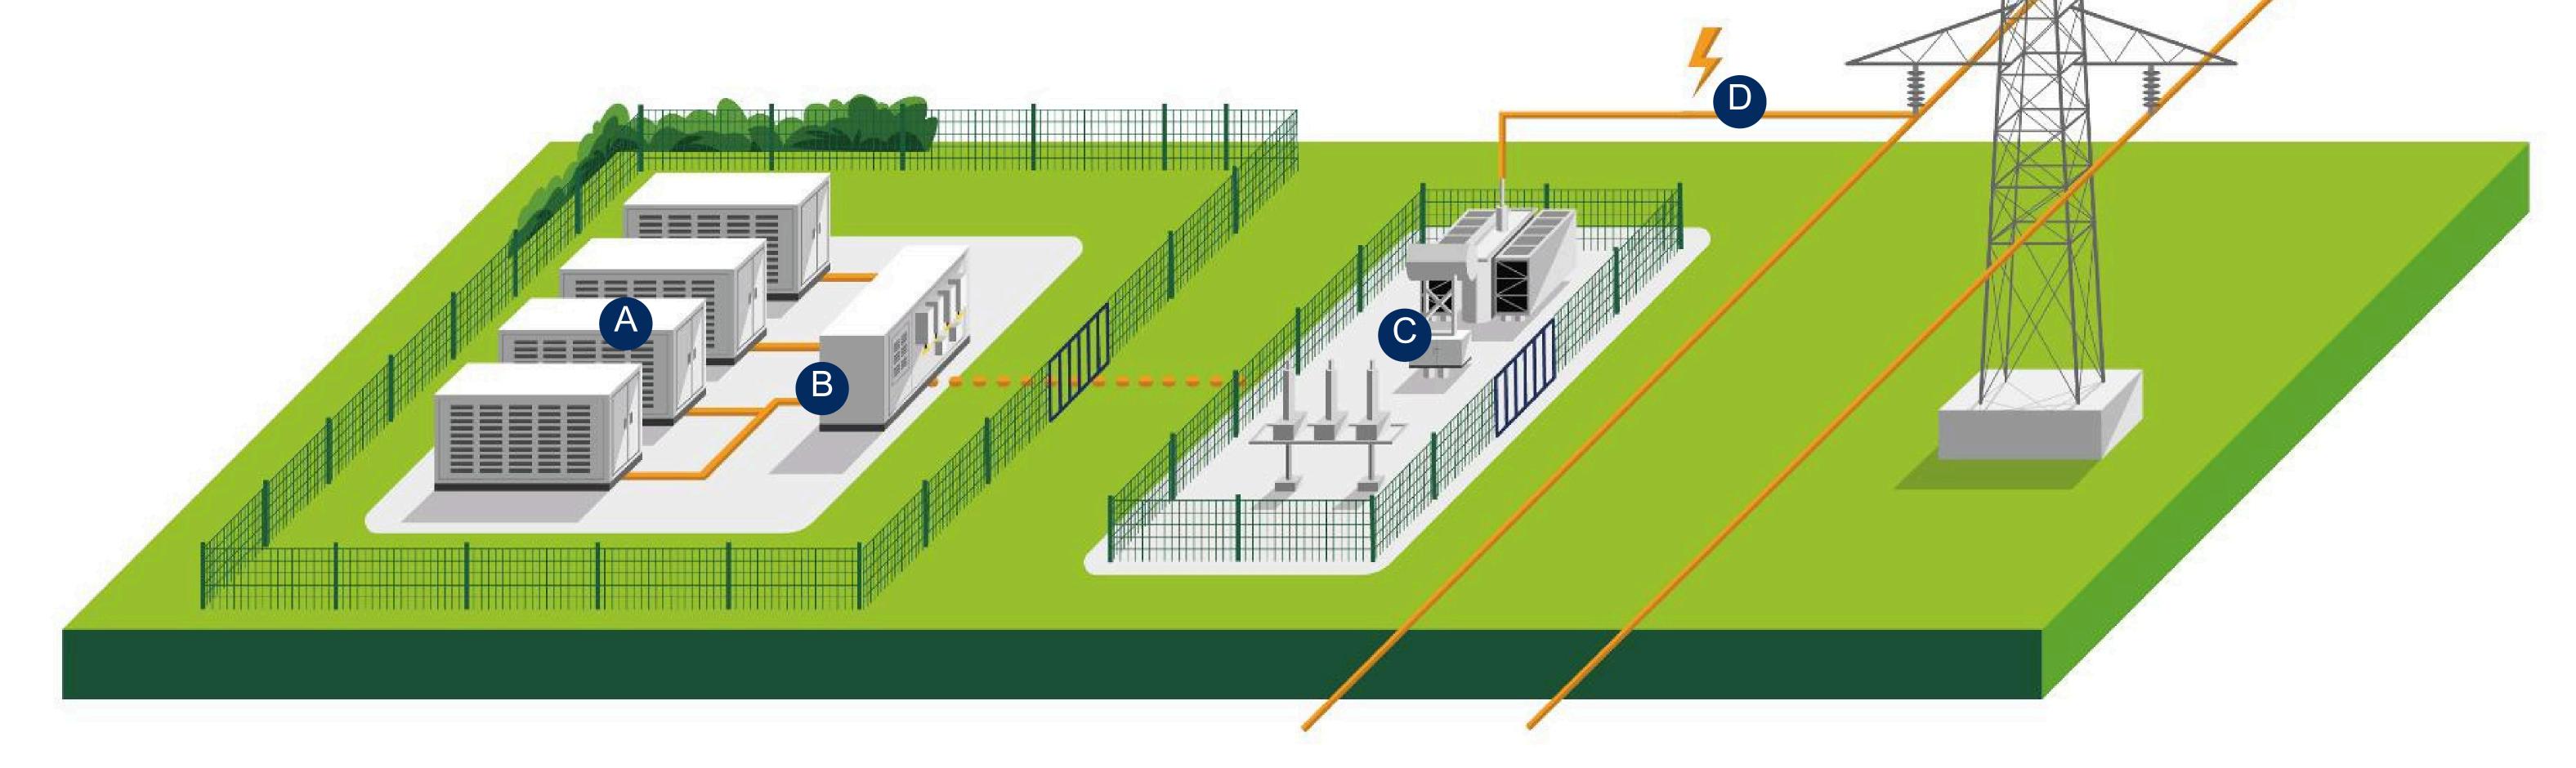

# VALLEY EDGE How BESS Work

#### **A - Battery Containers**

- Thousands of battery cells in steel containers
- Charge and discharge electricity to-and-from an electrical grid

#### **C** - Transformer Station

Converts high voltage (HV) to medium voltage (MV) and vice versa
SCADA system to operate the BESS

#### **B** - Inverter

 Converts direct current (DC) to alternating current (AC) and vice versa

#### **D** - Transmission Lines

- Transmission lines move electricity to-and-from the BESS
- Steel structures hold the lines overhead
- Electricity travels to-and-from the grid

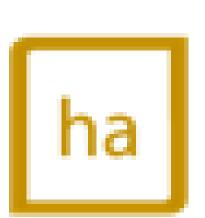

#### About Valley Edge BESS

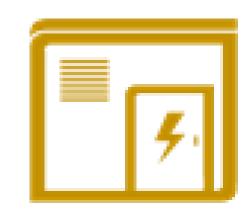

STANDALONE BESS FACILITY

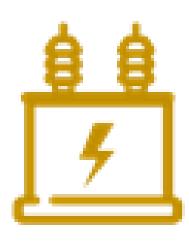

250 MW CAPACITY

~12 ACRES OF
AT-GRADE
INFRASTRUCTURE

288 LITHIUM-ION BATTERY CONTAINERS

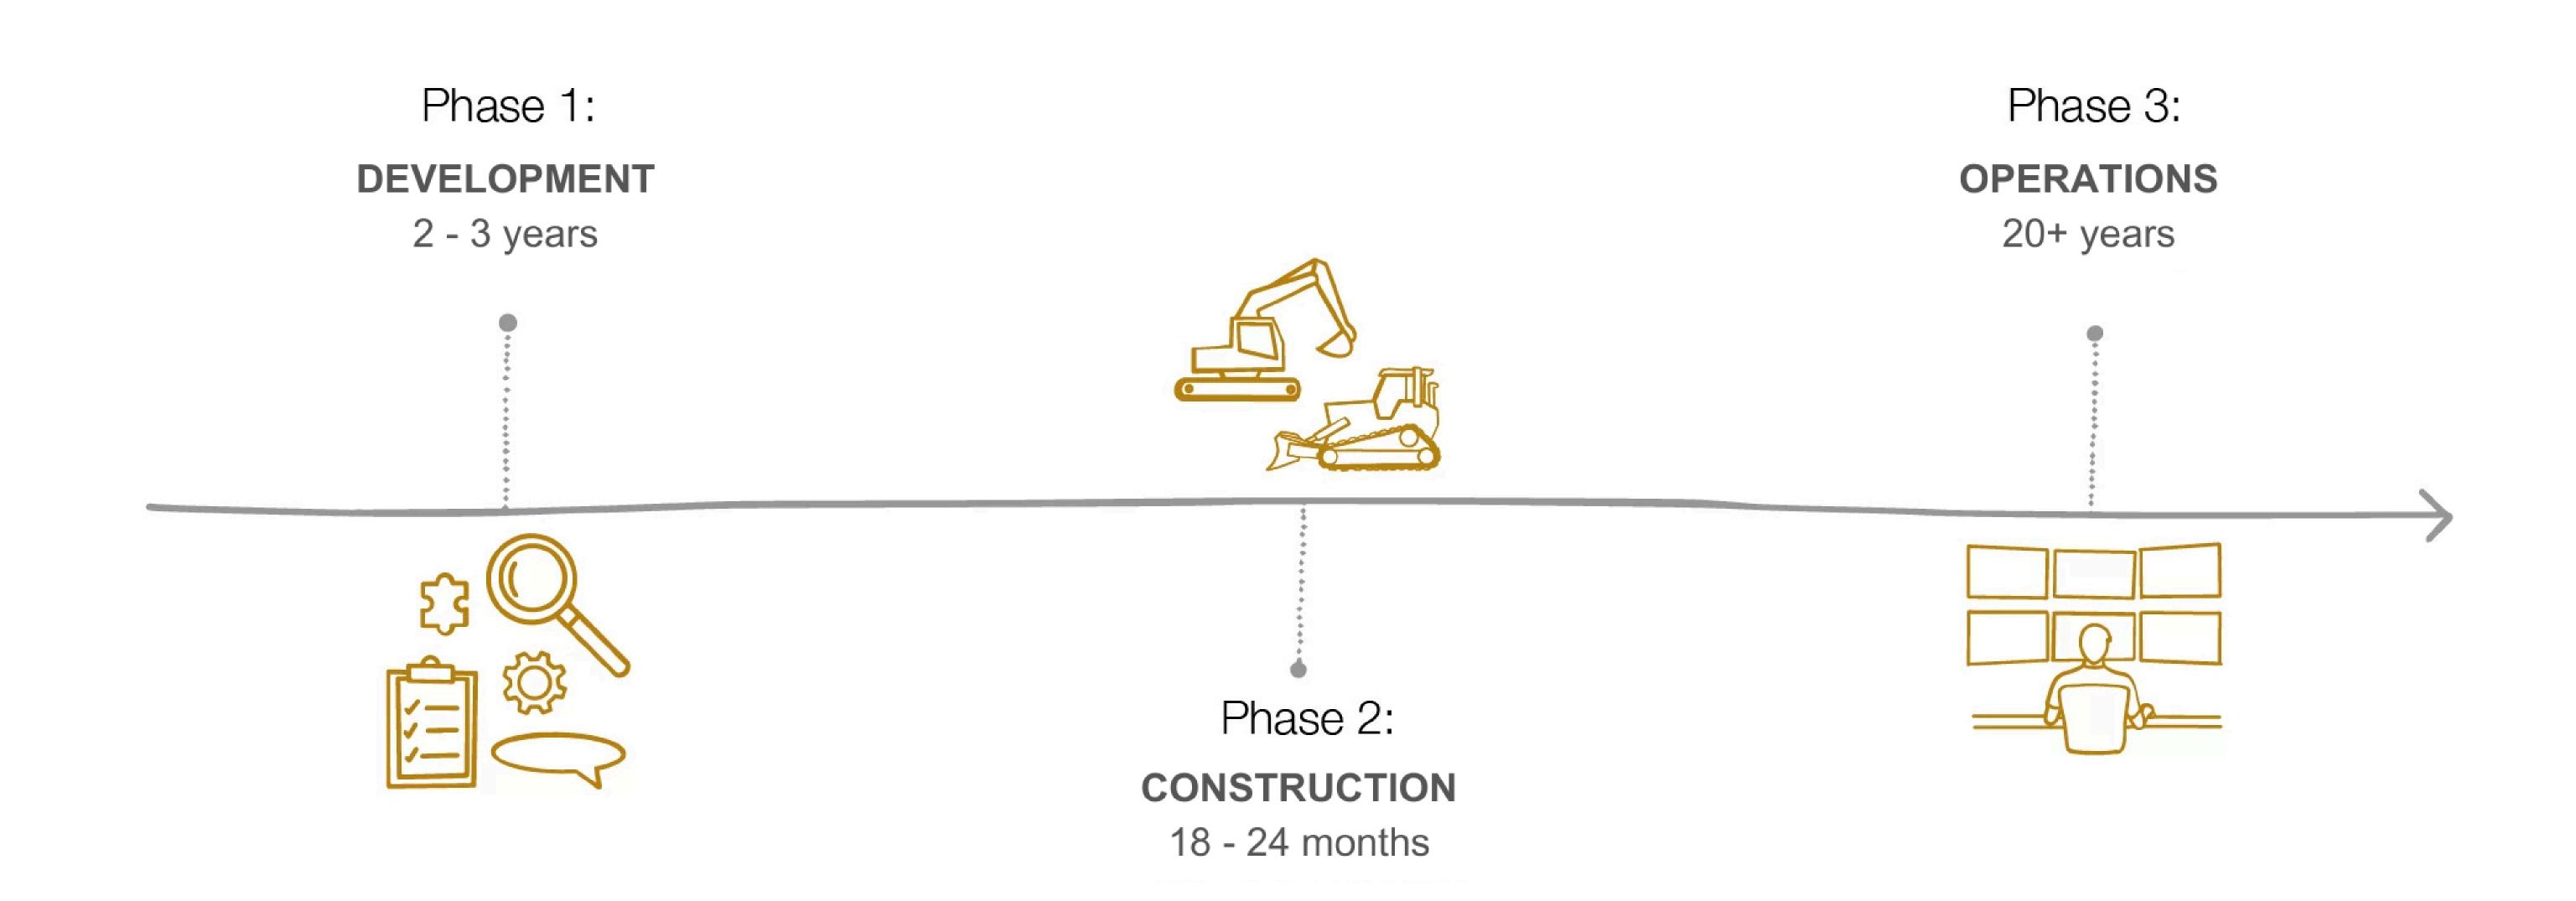

2 HIGH-VOLTAGE TRANSFORMERS

~750 METRES OF OVERHEAD TRANSMISSION LINE + STRUCTURES\*

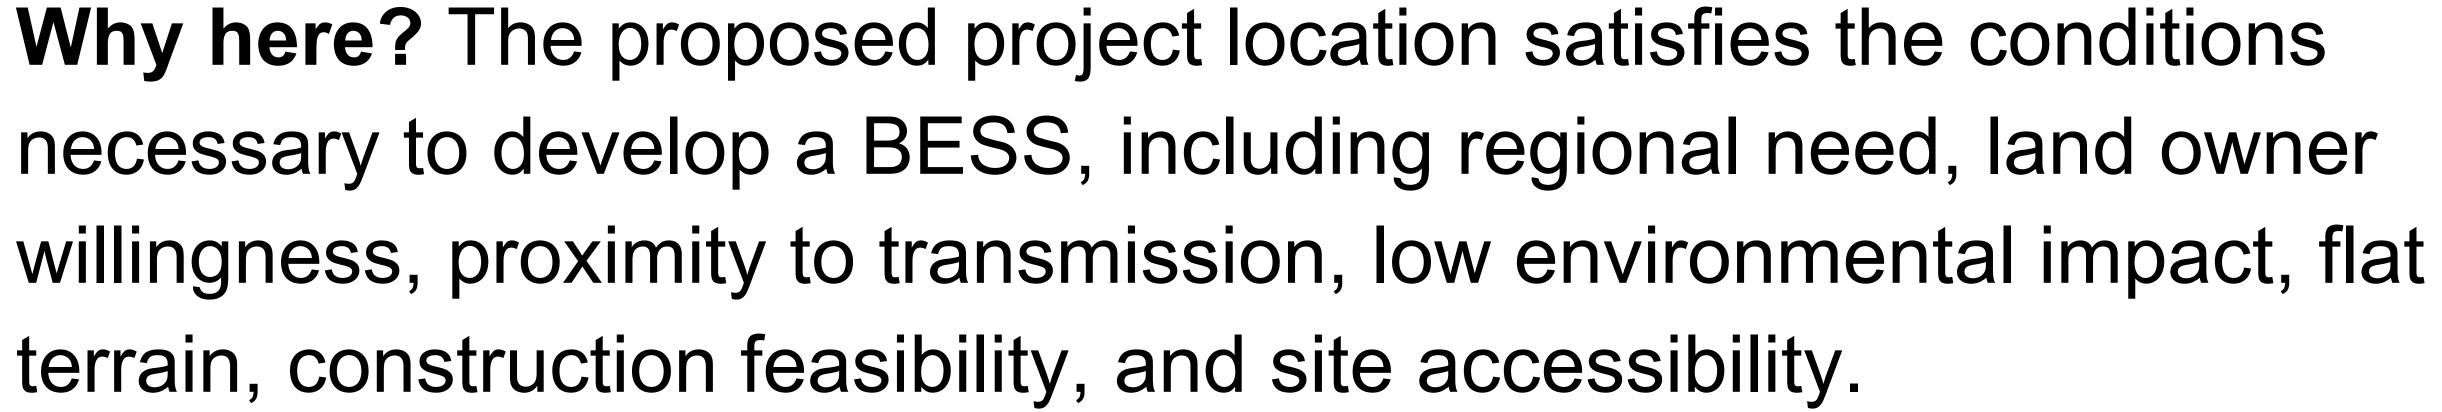

THIS INFORMATION IS PRELIMINARY AND SUBJECT TO CHANGE.
\*TRANSMISSION CONSULTATION AND IMPLEMENTATION WILL BE PERFORMED BY ALTALINK.

# Typical BESS Project Lifecycle

#### Project Location

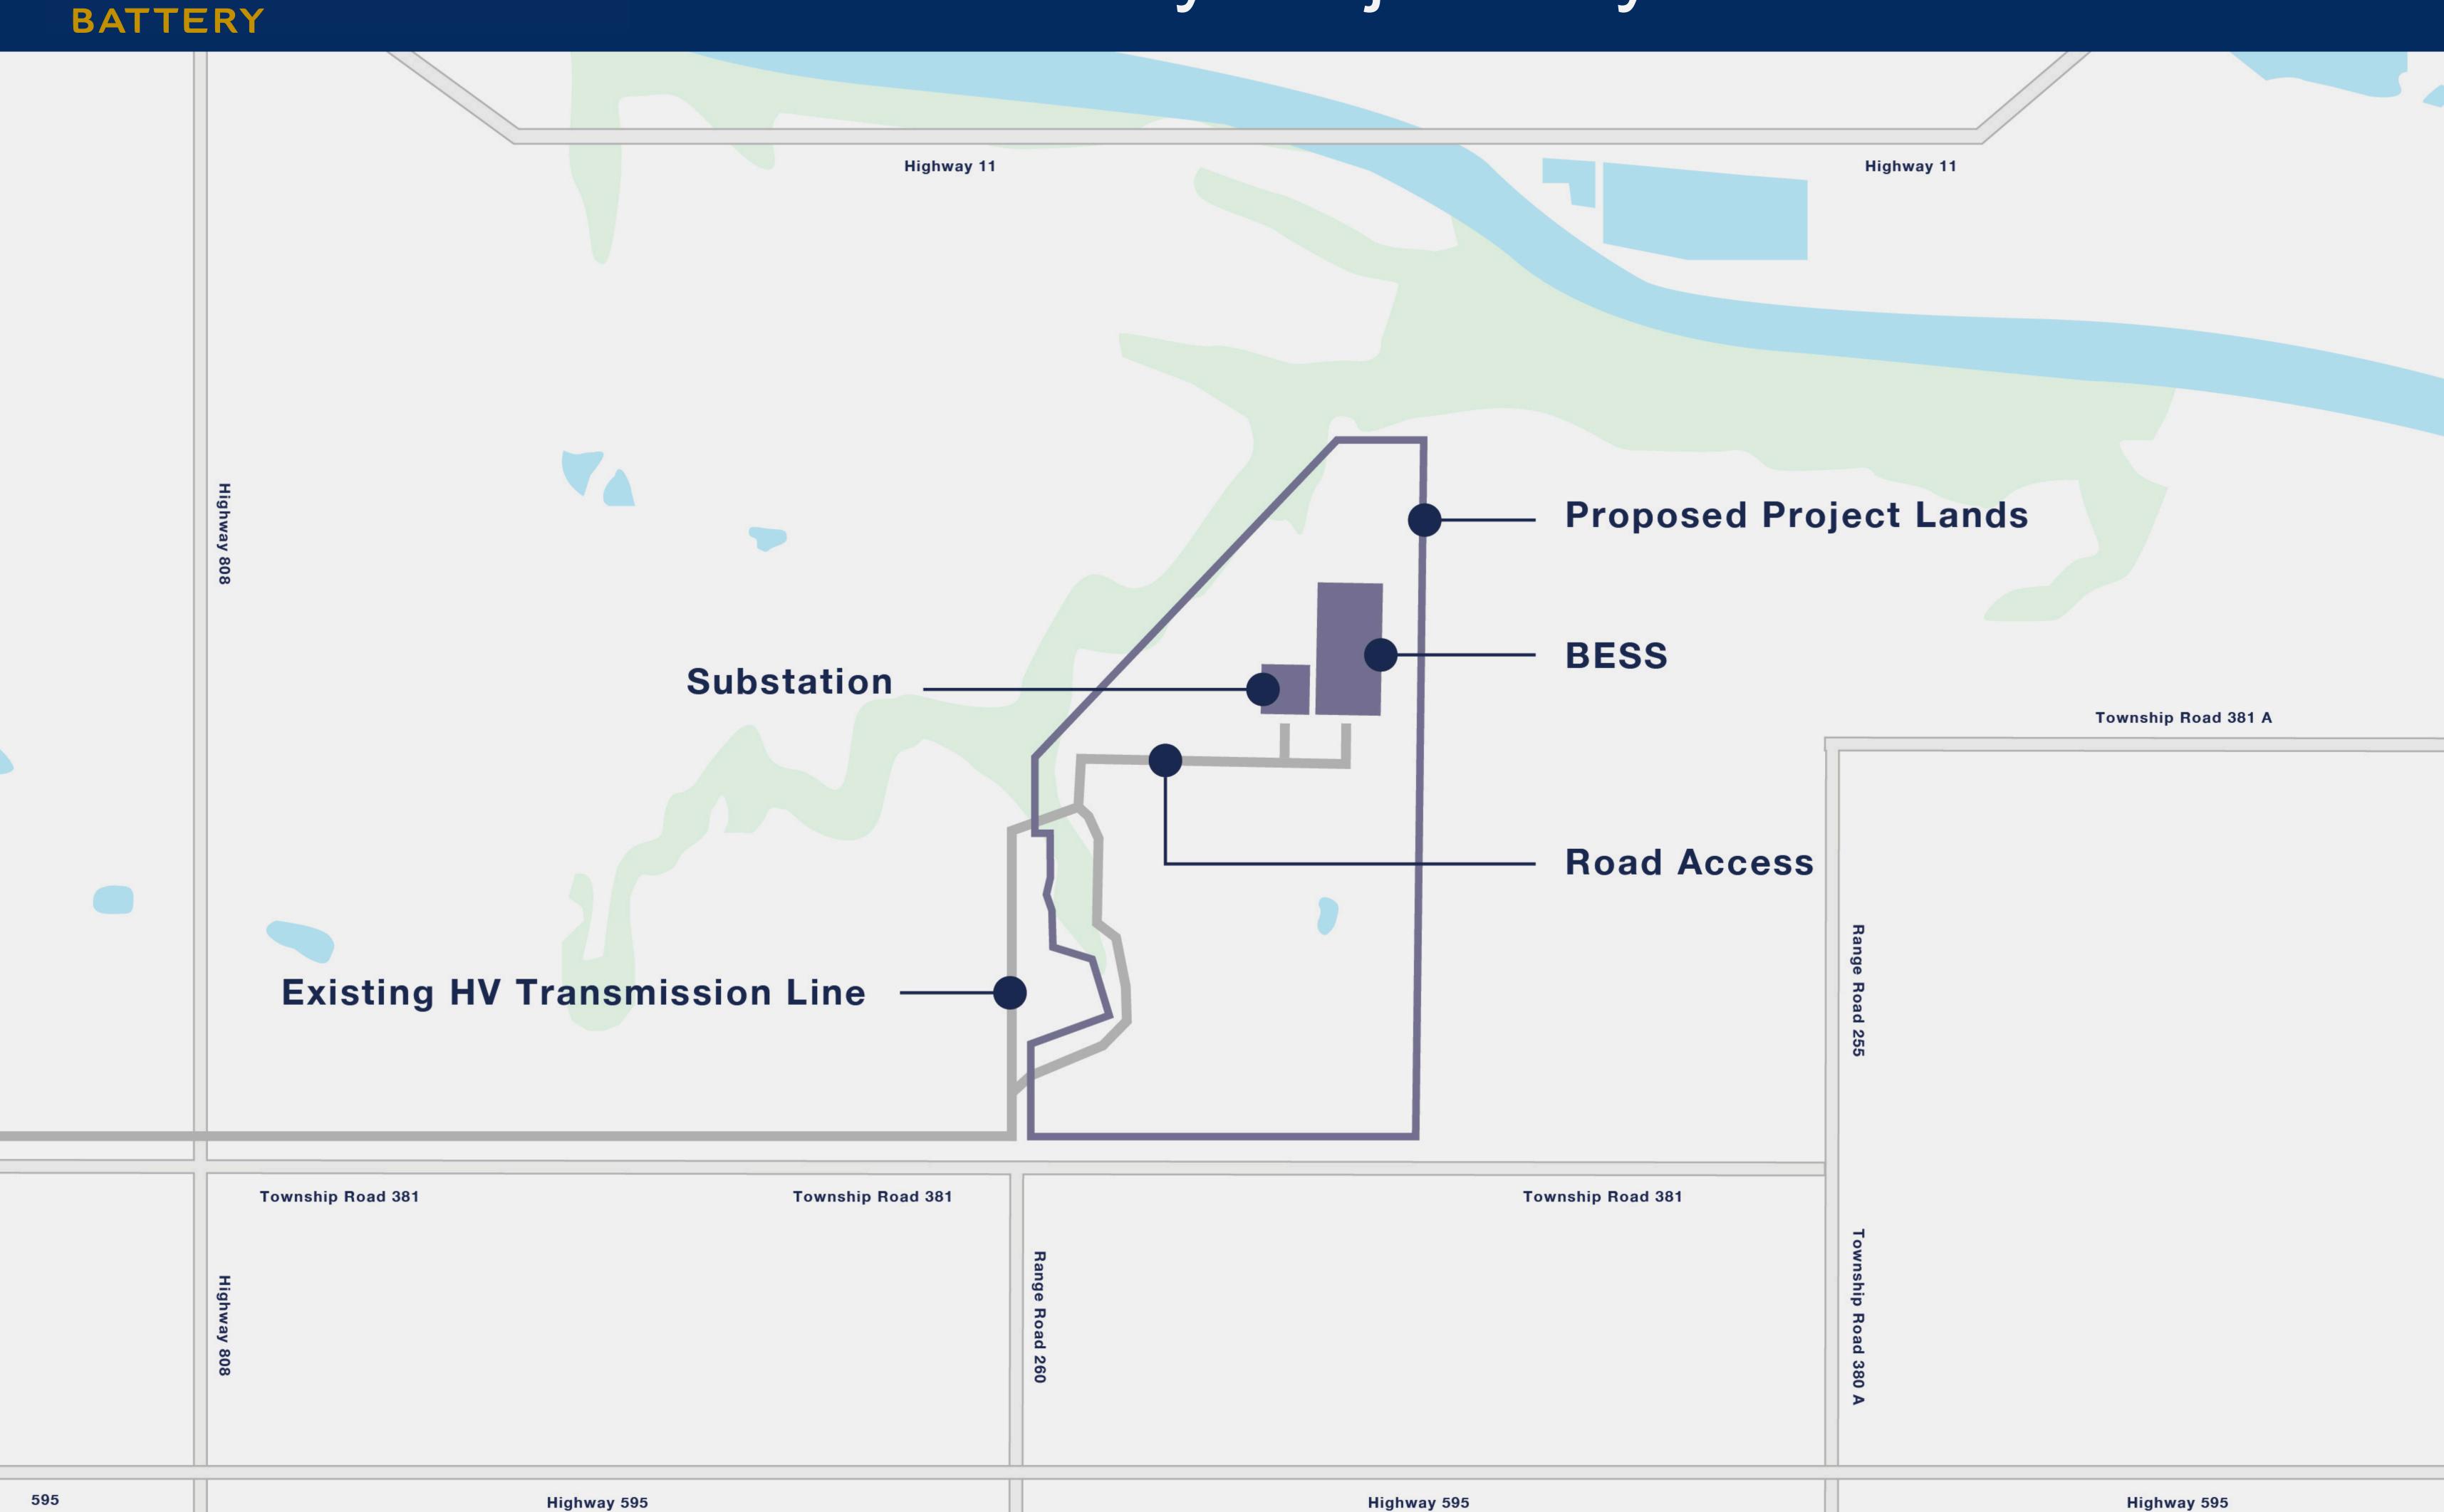

## VALLEY EDGE

## Preliminary Project Layout

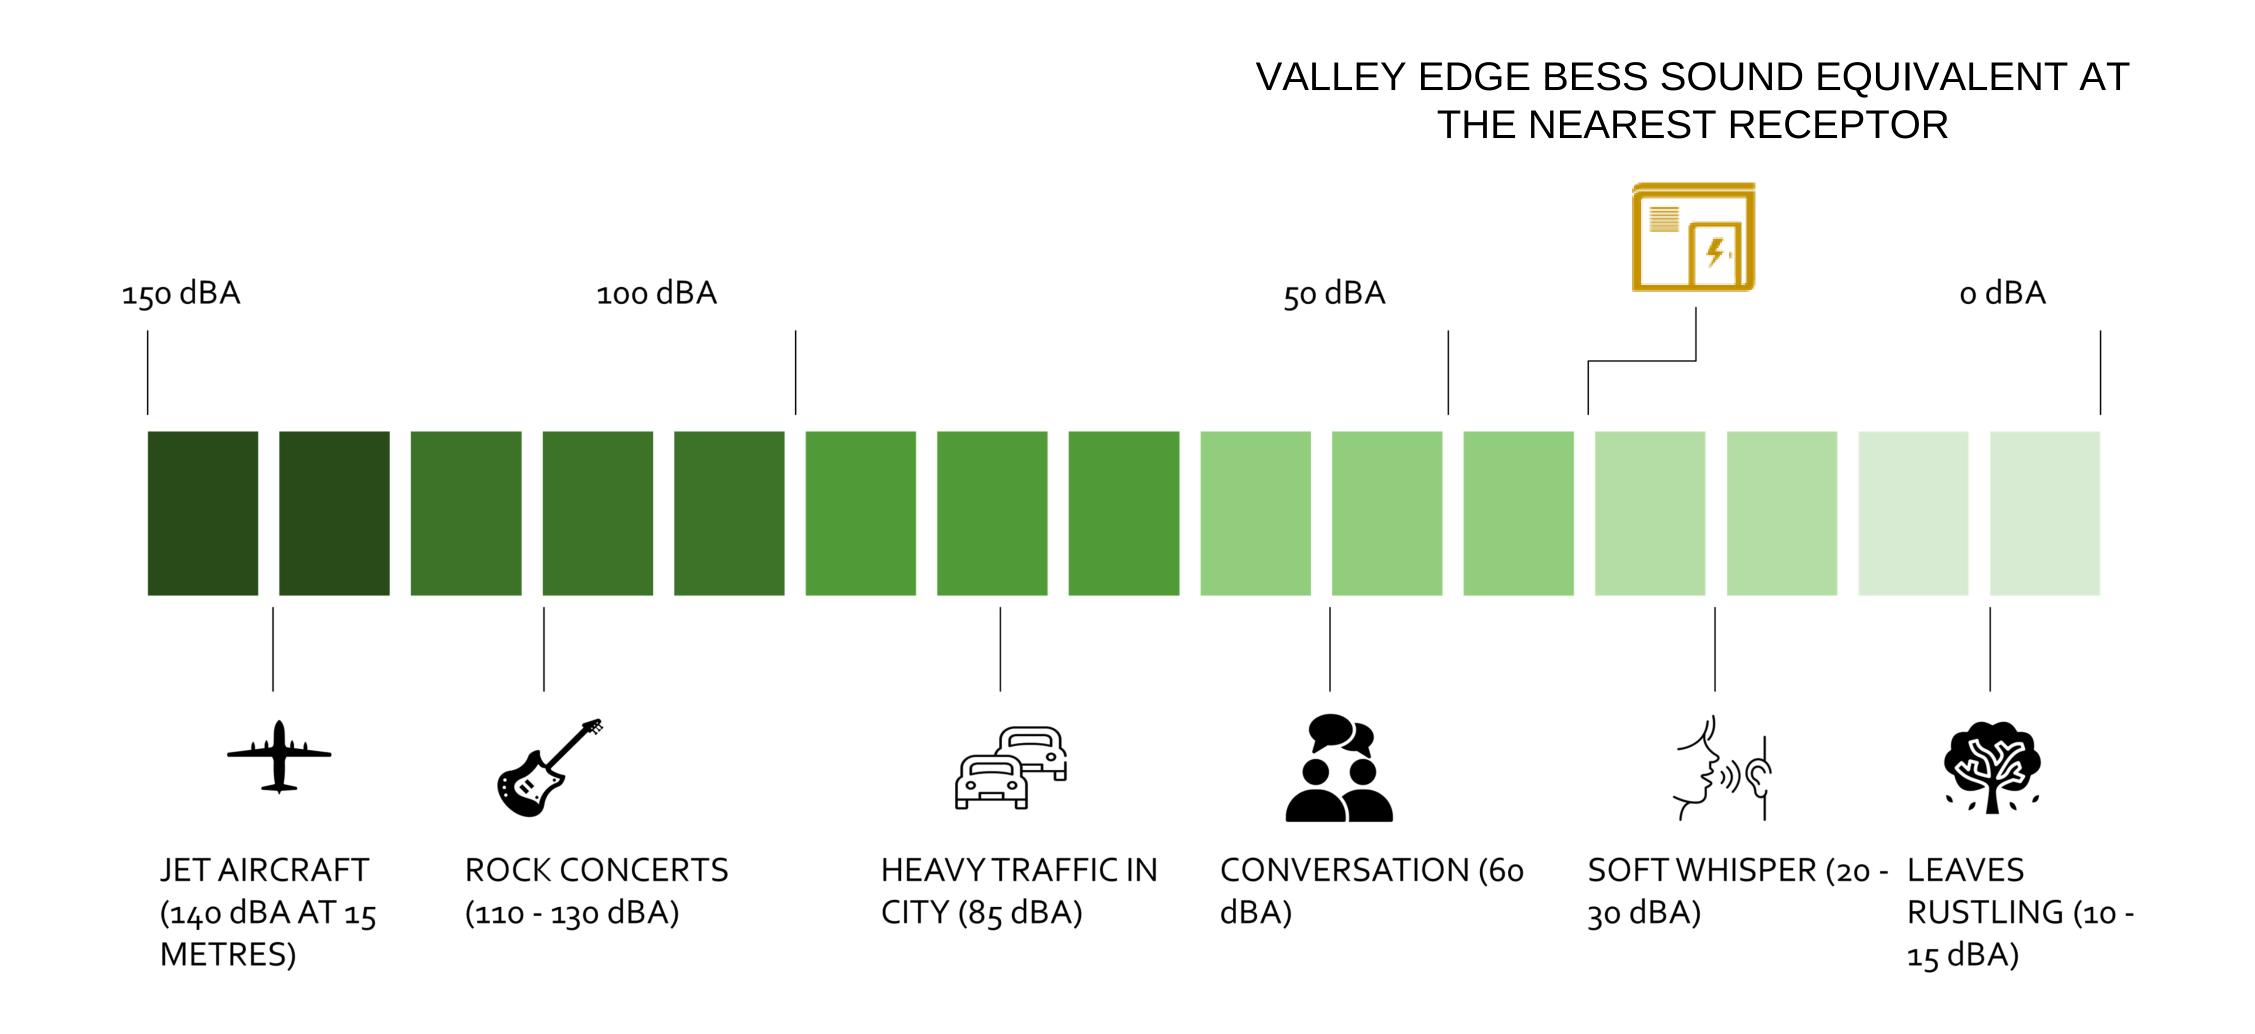

#### Environmental Assessment

- An Environmental Evaluation and Environmental Protection Plan for Valley Edge BESS is underway to assess potential impacts to the environment resulting from BESS development.
- Where necessary, measures will be identified to mitigate potential impacts.
- The Environmental Evaluation and Environmental Protection Plan will be submitted to the Ministry of Environment and Protected Areas for review and feedback.

## VALLEY EDGE Noise Assessment

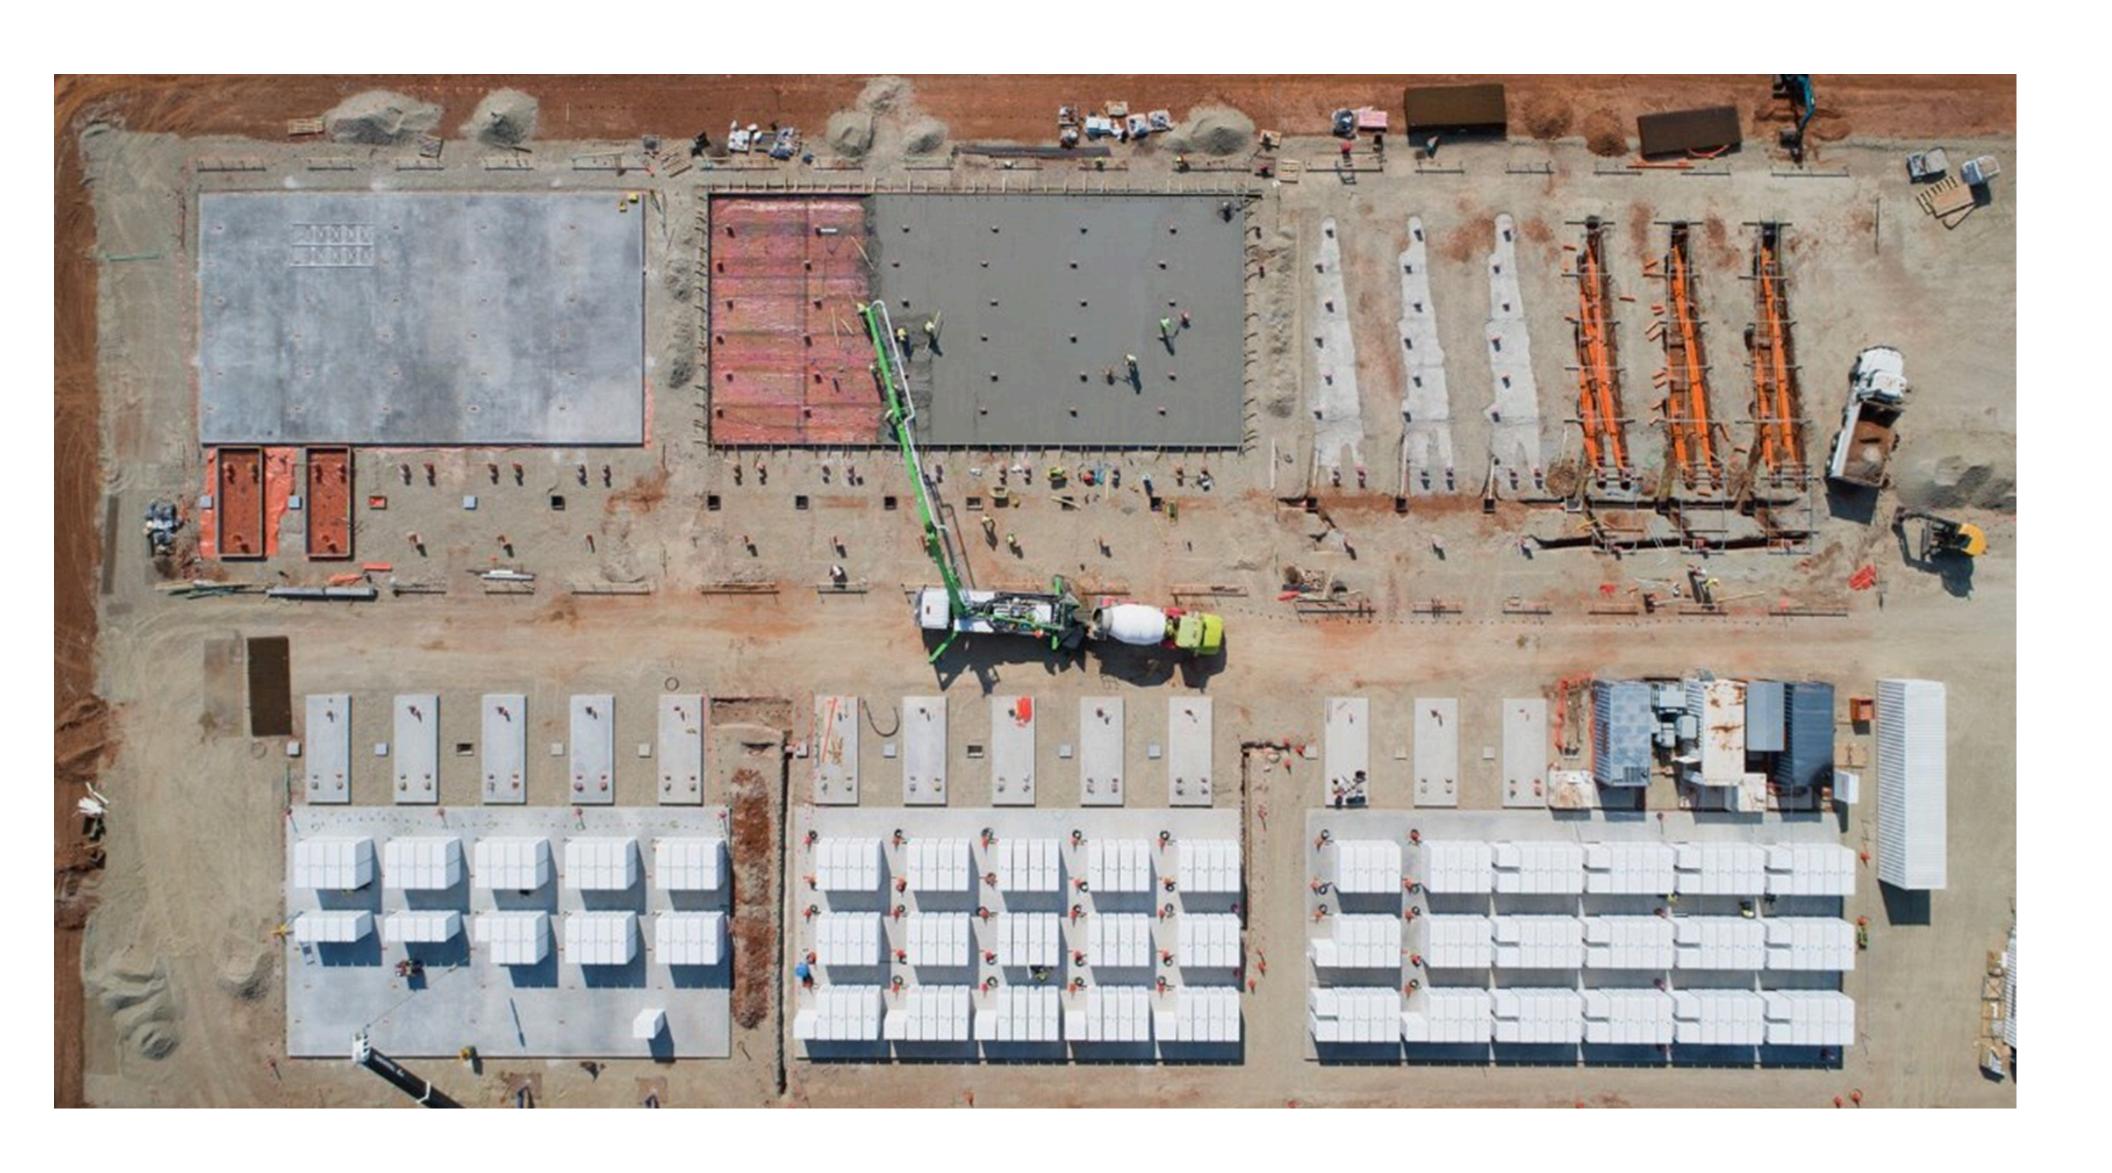

- Both battery container fans and transformers emit noise fans oscillate to cool the batteries during warm conditions, and transformers emit a humming noise.
- A Noise Impact Assessment has been conducted and will be included in Neoen's AUC application.
- Valley Edge BESS will comply with AUC Rule 012: Noise Control, which is below 40 dBA at the nearest dwelling.

# VALLEY EDGE BESS Safety

- BESS are designed to prevent risk of hazard, including thermal runaway and spill events.
- Thermal runaway occurs when damaged battery cells heat abnormally, resulting in the possibility of smoke, fire, or combustion.
- Spill events, including refrigerant, coolant, and oil spills, can result from equipment malfunctions or blunt force to BESS components.
- Hazard events are rare and are prevented by rigorous safety design, thorough maintenance, 24/7 monitoring, and stringent safety protocols.
- Valley Edge BESS will incorporate active and passive protections, such as the use of fire barriers, battery spacing, and the use of non-combustible oils, to mitigate risks.
- Neoen engages local emergency responders in the development of its fire prevention and emergency response plans, and provides first responder facility training.

#### BESS Construction

BESS construction typically takes 1.5 years to complete, and includes the following activities:

- Temporary fence installation
- Equipment mobilization
- Temporary storage areas
- Material and soil deliveries (by truck)
- Clearing and grading
- Shallow excavation and pouring of concrete slabs or pile installation
- Hoisting of pre-assembled battery containers and transformers
- Erection of steel structures and transmission lines
- Electrical connection work
- Acoustic barrier wall installation
- Landscaping

## BESS Operations

Valley Edge BESS is expected to complete one charge and discharge cycle per day.

A small crew of workers, contracted by Neoen, will operate Valley Edge BESS. Neoen can elect to operate each day or not.

Did you know that Neoen is a pioneer in battery energy storage? Neoen delivered the world's first utility scale battery, Victorian Big Battery, located in South Australia.

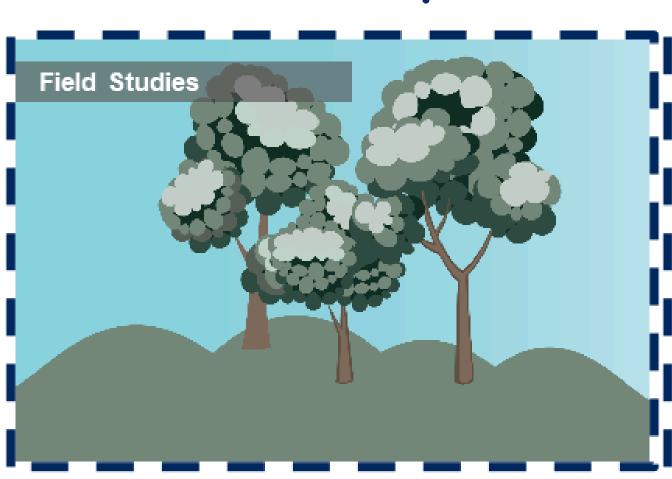

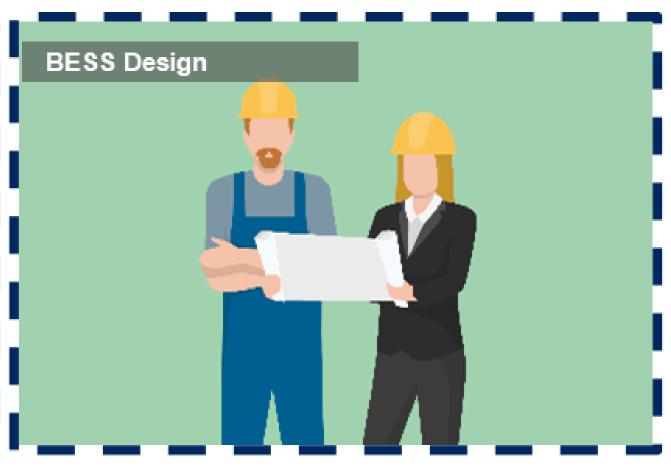

## Target Project Timeline

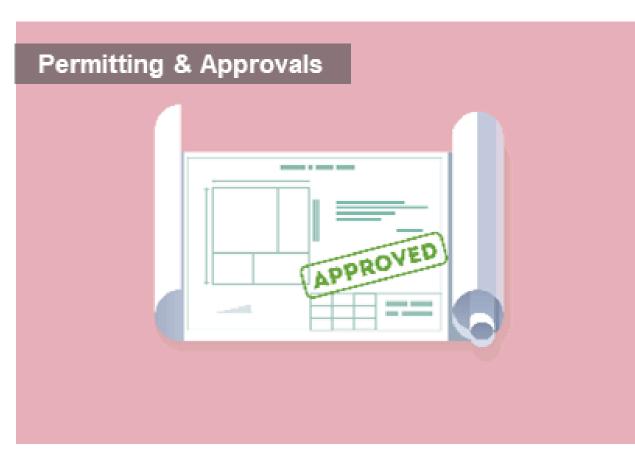

#### WE ARE HERE

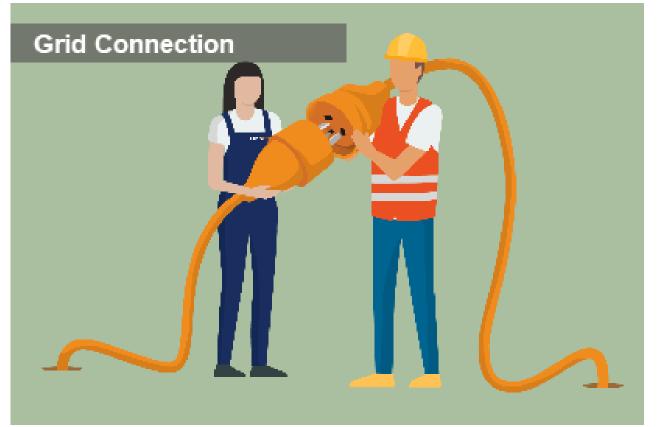

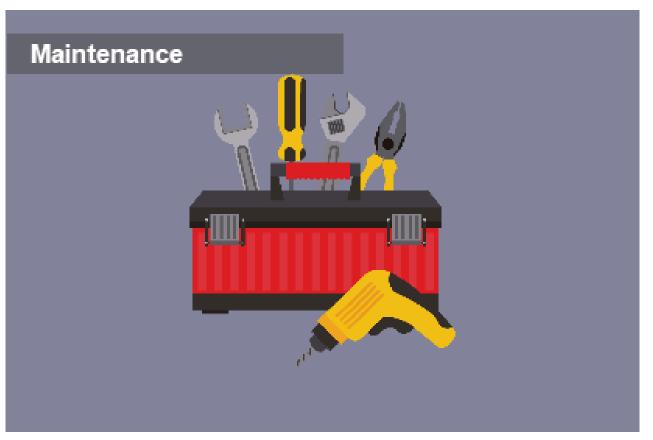

2024 - Q2 2025

PROJECT DEVELOPMENT PUBLIC CONSULTATION Q3 - Q4 2025
SUBMISSION OF AUC &
MUNICIPAL DEVELOPMENT
APPLICATIONS

Q4 2027 CONSTRUCTION 2029 OPERATIONS (20+ YEARS)

# VALLEY EDGE Community Consultation

- The consultation period for Valley Edge BESS began in late 2024 and will continue through spring 2025.
- Neoen is consulting landowners and occupants within an 800-metre radius of the proposed project lands as well as stakeholders and Indigenous communities.
- Feedback gathered during the consultation period will inform potential project improvements and will be entered into a public consultation record that will form part of Neoen's AUC application.

#### We want to hear from you!

- Phone: (587) 434-7547
- Email: sbrown@sabrenergyconsulting.com
- Web: www.valleyedgebattery.ca (via feedback form)
- Mail: Box 3, Suite 530, 150 9th Avenue SW, Calgary, AB T2P 3H9
- Request a 1-on-1 meeting

# VALLEY EDGE Community Benefits

- Neoen believes its projects should benefit the communities that host them.
- Community benefits for Valley Edge BESS will include:
  - Local job and spending opportunities.
  - A community benefits fund to support clean energy, biodiversity, environmental, Indigenous-specific, cultural, social and/or educational initiatives.
  - A local art initiative.
- Community benefits for Valley Edge BESS will come into effect as early as construction.
